## MY PROJECTS

### Hospital-Management

📅 Date period 📍 Location

🔗 <https://github.com/nikamamol/Hospital-Management>

The Hospital Management System (HMS) is a comprehensive solution for managing hospital operations, enhancing efficiency and patient care through a user-friendly admin dashboard. It includes features like doctor management, appointment scheduling, and role-based access control to ensure secure operations. Built with React.js for the frontend and Node.js with Express.js for the backend, HMS utilizes MongoDB for data storage. Key functionalities include adding, updating, and deleting doctor information, scheduling and managing appointments, and performing CRUD operations across the system.

- Technologies Used: Frontend: React.js Backend: Node.js with Express.js Database: MongoDB
